PROFILE

ICT graduate from Durban University of Technology with an Advanced Diploma in ICT: Business Intelligence (NQF Level 7) and a Diploma in ICT: Business Analysis. Skilled in SQL and Microsoft SQL Server, with working knowledge of C#, Python and Git/GitHub, and a solid grounding in the software development lifecycle (SDLC), testing and technical documentation. Data Analyst Intern with hands-on Oracle SQL experience, and built database-driven projects covering SQL scripting, ETL, data validation and reporting. Seeking the Graduate Programme in Application Development to grow Microsoft-based development skills under the guidance of senior developers.

EDUCATION

Advanced Diploma in Information and Communication Technology: Business Intelligence (NQF Level 7)
Durban University of Technology | 2026
Relevant modules: Business Intelligence, Business Process Reengineering
Diploma in Information and Communication Technology: Business Analysis
Durban University of Technology | 2025
Matric (National Senior Certificate) | Temple Valley Secondary School | 2022

SKILLS

Programming: C#, Python (Pandas, NumPy), Jupyter Notebook, SQL
Databases: Microsoft SQL Server, Oracle SQL, PostgreSQL, DBeaver, SQL queries, SQL scripting, relational database concepts, star schema
Source Control: Git, GitHub
Development Practices: SDLC, Agile, Scrum, Jira, requirements gathering, technical documentation
Testing and Debugging: functional testing, regression testing, UAT, defect tracking, troubleshooting, root-cause analysis
Other Tools: Power BI, DAX, Power Query, Excel, AWS
Strengths: analytical thinking, attention to detail, learning agility, communicating technical information to non-technical audiences

WORK EXPERIENCE

Data Analyst Intern | Durban University of Technology, Durban | December 2025 – Present

- Wrote and analysed Oracle SQL queries on university student and academic data, including marks and enrolment-related information, to support academic and operational reporting
- Used Oracle SQL Developer, DBeaver, Microsoft SQL tools, Python and Jupyter Notebook for data analysis and development work
- Gained practical experience in data extraction, transformation, data quality and structured reporting in a university information-systems environment
- Collaborated with the Data Analytics team to translate business requirements into data-driven solutions

PROJECTS

ShopSmart Retail Data Warehouse | SQL, ETL, AWS, Dimensional Modelling

- Designed a cloud-based database integrating seven source datasets, using a staging layer and SQL ETL scripts to standardise data, resolve duplicates and handle missing values
- Designed a star schema with surrogate keys and defined fact grain; documented data mappings and treatment rules for each data quality issue
- Tested the database with row-count and sales reconciliation, foreign key checks and duplicate key checks
- Wrote 15+ analytical SQL queries on sales trends, products, stores, customers and stock risk

Insurance Fraud and Risk Assessment System | Power BI, DAX, Power Query

- Cleaned and validated a 53,503-record dataset, flagging 2,247 records with invalid policy dates
- Built rules-based logic in DAX combining six indicators to classify records as Low, Medium or High risk
- Delivered a three-page interactive report and tested it by reconciling record counts, claim totals and risk bands against source data
